

# FOUNTAIN CONNECTION™

Heron of Alexandria (ca. 62 A.D.) designed a water fountain that used compressed air to lift water to a point higher than its origin. Using your own soda bottles and this device, you can demonstrate that same principle that is as amazing now as it was 1900 years ago. A sporting bubbling fountain that forms every time you turn this demonstration over. Additional experiments are suggested.

# WORLD'S SIMPLEST MOTOR™

Both Products Made in U.S.A.

Wrap the wire around a D-cell battery, scrape the ends, and the coil is ready to go in one of the world's easiest motors to build. The blister carded package includes everything (except battery) to have the motor together and working in a very short time. The principles of magnetism can be demonstrated as the coil becomes energized in each rotation and pushes against a mounted ceramic magnet with enough energy to keep it spinning. Additional experiments are suggested for hours of fun and learning.
